Mission

Make FLOSS technologies available to companies of all sizes, optimizing their IT infrastructure and providing the greatest return on investment.

Vision

Be the FLOSS-based solutions company that walks together the life of your bussiness through quality service.

History

Flozer was born with the realization of extending the FLOSS model together with an ITIL methodology to archieve promoting the use of open standards and FLOSS in diverent organizations providing high-performance solutions at a low cost.

We offer your company:

- A team of experts.
- Speed and flexibility.
- Advanced technology.
- Compromise and responsibility.
- Trustability and quality.

With us you'll find that the quality/low cost pair is possible and will make your company more competent and successful.

Why FLOSS ?

Free/Libre/Open-Source Software, or FLOSS, is an alternative term for free software. It is used by those who wish to be inclusive or who do not want to take a side on whether free software or open-source software is a better term, although neither side has shown much enthusiasm for the term FLOSS

Freedom

- **Freedom 1.** The freedom to run the program for any purpose.
- **Freedom 2.** The freedom to study and modify the program.
- **Freedom 3.** The freedom to copy the program so you can help your neighbor.
- **Freedom 4.** The freedom to improve the program, and release your improvements to the public, so that the whole community benefits.

What is Open Source?

Open source is similar to free software. The biggest difference is that open source sees FLOSS as just a way of making better software, and doesn't value the freedom of the people.

In 1998, some free software developers figured that by keeping quiet about ethics and freedom, and talking only about the practical benefits of free software, they might be able to spread free software better, especially to businesses. The term "open source" is offered as a way of doing this.

Flozer and the FLOSS Community

Flozer contributes actively with the FLOSS community in different projects with new Libre Software based in standards and open technologies.

Benefits FLOSS

- **Lower Total Costs of Ownership (TCO).** Given minimal costs, it is no surprise that organizations are adopting FLOSS in large numbers. For example, schools in some of the poorest regions of Spain already provide one workstation for every two pupils.
- **Eliminate dependence on software vendors.** FLOSS users apparently place greatest value upon their freedom to choose the vendor who best meets their needs for software maintenance and support, instead of being dependent upon a single supplier and forced to either wait for desired improvements, or else pay for upgrades or new versions that they neither need nor want.
- **Pedagogical benefits.** The pedagogical benefits of FLOSS are harder to measure, but may be most important of all. FLOSS is developed by communities, for communities, in an open collaborative way, and is freely shared with others who embrace the concepts and accept the licence terms. Individuals of all ages and abilities can engage in FLOSS projects according to their own strengths and interests.
- **Security.** The main reason open source software can be more robust than proprietary systems is that customers and developers can look at the code, they are more likely to find a bug and create a security patch. In a closed source model, customers must rely on the vendors to identify, diagnose and issue a patch, which can be a lengthy process.
- **Quality.** the highest ranking reasons for using free software on quality:
 - Higher stability
 - Better access protection
 - Higher performance
 - Better functionality
