## Our Services & Solutions

### Solutions

#### Connectivity & Security

We offer you a variety of services to provide your communications infrastructure the best connectivity and security, handling in a simple and centralized way all your corporate network, securing your internal transactions and external communication with your business partners.

#### IT Management

For the management of IT infrastructures we have a wide range of solutions which will ease the control, management and monitoring of your information services in a centralized way.

#### Internet & Intranet

The Internet and Intranet solutions provide solutions for small, medium and big corporations, offering all the services a corporation requires to execute its businesses in an efficient way and in sync with the changing market.

#### Application Development

We have a wide variety of stacks for the development of Web applications in J2EE, LAMP and .NET environments, providing both your IT infrastructure and your development team with an efficient approach on unification of the corporate development infrastructure.

#### Communications & Telephony

The combination of cost, quality, security and multiple functionality makes IP telephony the logical evolution of those businesses that search for more than just a voice service. When clients need to wide, improve or change anything of their telecommunications solution they don't even consider to continue investing in TDM technology, since it isn't an investment for the future or efficient.

### Services

#### FLOSS Support

Our technical service supports are focused on helping to obtain the best profit of investment in technology. We offer numerous support options, from autoservices in the web to direct assistance through phone and email at engineers on your own business. Our experts go further than solving your problems, to help find ways to avoid system downtimes and optimize the use of the solutions of your organization in a proactive way.

#### FLOSS Consulting

The great advancements of Linux in corporations and the use of software based in open source components make companies progressively realize the advantages of this technological movement. Not only they significantly cut the costs of development and implementation, but they also provide reduction of risks and benefits of stability and performance are reached with a short-term return of investment.

#### Remote Monitoring

Our solution provides a server of monitorization with systems of redundancy and high availability which will allow us to monitor your services in a 24/7 option. Our Internet access is secured against security incidences and we have a trustworthy connectivity service.

#### Migration

The experts at Flozer work with you to profit of the investment in existing infrastructure, to reach your business goals and ease future expansion using open source software. Flozer uses a focus of probed efficacy to design and implement open source solutions for your corporate problems which will allow you to obtain a quick return of investment. Our exceptional services of formation and technical assistance warrant that the investment continues to provide dividends in the future.

#### Virtualization

The virtualization increases the servers usage. The ability to easily move multiple virtual servers onto a single physical machine and then migrate those virtual servers whenever additional resources are needed allows for a radical reduction in the total number of servers needed by your organization. Without the benefit of virtualization the average server only has a utilization rate of 15%. This provides a large window of opportunity.

#### Professional Services

We make our best professionals available to develop internal projects that require of our experience on open technologies, with open source and GNU/Linux.
