

Flozer MailGate

An intelligent solution for the secure exchange of electronic mail. Integrates cryptographic processes (cipher/decipher, signatures and verifications) in a centralized place of the corporate network. Existent mail services provide with our solution confidentiality, authentication and integrity services in an easy and secure way.

The problem

Email has become the standard medium of today's companies, for communication between employees, clients and offices, which often involves confidential information. This implies the necessity to protect emailed information from being intercepted by outsiders. Current solutions involve complex protocols which have to be followed by all participants and supported at their working places. Due to these difficulties, in the majority of cases such security mechanisms don't get respected, completely exposing information to others and putting the company's security policies at risk.

The solution

Flozer MailGate is an intelligent solution for the automatic use of encrypted and electronically signed email. It involves cryptographic processes (encryption/decryption, signing and signature verification) at a centralized place of the corporate network. Our solution adds confidentiality, authentication and integrity to existing mail services in a simple and secure way.

Highlights

- + Complete protection of your infrastructure against all known threats
- + Centralized management of your infrastructure security
- + Centralization of protection processes
- + Software updating
- + Remote monitoring

Centralized and Transparent Email Protector

“Protect the main way of information interchange of your company, the email.”
